PROFESSIONAL SUMMARY

Software support- and QA-oriented developer focused on troubleshooting production web applications across REST APIs, SQL/PostgreSQL data, Linux services, deployments, monitoring, and user-reported defects. Strong at reproducing issues, documenting expected vs. actual behavior, checking logs/data/configuration, verifying fixes, and writing clear technical notes.

TECHNICAL SKILLS

Support / QA	Issue triage, bug reports, reproduction steps, expected/actual results, severity notes, regression testing, Jira-style workflows
Diagnostics	Log analysis, SQL/data checks, REST API debugging, configuration review, monitoring, technical documentation
Web & Data	TypeScript, JavaScript, PHP, Node.js, Express, React, HTML/CSS, SQL, PostgreSQL, relational database design
Systems & Tools	Linux administration, Docker, Git, CI/CD, automated backups, application operations
Additional Languages	Python, C/C++, C#

PROFESSIONAL EXPERIENCE

Full-Stack Developer & Systems Administrator

2023–Present

Independent / Contract

- Operate a production web platform and troubleshoot user-facing issues across TypeScript/React UI, custom PHP modules, REST/API behavior, SQL/PostgreSQL data, Linux services, configuration, deployments, and monitoring.
- Investigate problems using logs, SQL queries, deployment history, recent changes, and user reports; document findings, likely causes, and resolution paths for repeatable support.
- Maintain CI/CD, backups, monitoring, release workflows, Dockerized services, Git workflows, and technical documentation for setup, troubleshooting, edge cases, and operations.

Quality Assurance Engineer (Contract)

Jun 2022–Aug 2023

Artificer Studios

- Tested unreleased game builds across core gameplay, UI, progression, and stability; reproduced and documented defects with clear steps, expected vs. actual behavior, severity notes, and build/version context.
- Verified fixes across build updates and supported regression testing and release-readiness checks by tracking issue status and communicating concise technical findings.

SELECTED PROJECTS

- **URL Shortener** — TypeScript/Express/React/PostgreSQL service with REST workflows, SQL-backed click analytics, URL revocation, domain blacklist, automated tests (vite), and Docker Compose setup for repeatable troubleshooting.
- **MicroRules** — C# expression DSL that parses and compiles expressions into executable functions at runtime; includes examples, benchmarks, tests, and clear error behavior for edge cases.
- **OMF Parser** — Python parser/dumper for Relocatable Object Module Format (OMF) files based on the TIS specification; built around careful data parsing, validation, and standards compliance.

EDUCATION

University of Pittsburgh — Computer Science coursework

2015–2017

Community College of Westmoreland County — Associate of Science

2012–2014

Portfolio writing and technical notes: hk47196.github.io (technical debugging write-ups, parser/project notes, Linux/systems topics).
